

YOUR PREMIUM PARTNER IN WASTE MANAGEMENT SOLUTIONS

WASTE MANAGEMENT SOLUTIONS

G SERIES EUROPE'S BEST SELLING RCV

Geesinknorba provides waste management solutions for all individual needs. We continually strive to develop quality products that exceed expectations in terms of reliability, profitability and innovation in the most demanding of conditions. With more than 250 years of experience in engineering, manufacturing and servicing of our products, no one has a more dedicated team of people who understand the refuse market as we do.

As part of Mutares, the Munich based industrial group, we benefit from their expertise to continue developing tomorrow's products and exploit new areas of growth.

OUR HISTORY

FROM HORSES TO HORSEPOWER

The history of Geesinknorba goes back to 1875, when Jacobus Geesink started business with the production of sulkies, handcarts and wheeled fire extinguishers. The first horse drawn refuse collection vehicles – were produced in 1915. In 2002, the 10.000th GPM rolled off the production line. This patented compaction mechanism within the machine is our most successful product to date, the high quality mechanism enables it to compact more refuse than that of a standard type of compaction mechanism. In 2003 the third generation of the GPM was successfully launched, at the same time the installation of the fully automated production line at the site in Emmeloord was completed. With more than 4.000 sold units the G Series is the flagship product of the company.

In 2008 the production of the N-Series products was also centralized at the modern production site in Emmeloord, the N-Series accounts for 40 % of the production of refuse collection vehicles.

OUR PRODUCTS

DESIGNED TO LAST

Geesinknorba offers a complete line of refuse collection vehicles to meet an increasing variety of applications. Whether you need a simple refuse body, a smart smaller GN Sseries vehicle or a more complex unit to handle a large variety of containers, we can supply it. Our product line includes the largest range available in Europe from a single supplier of rear loader, vertically or horizontally split multifraction units, smaller vehicles, portable and static compactors.

Our high quality lifting devices offer an integrated solution with the benefit of a short overall rear overhang. They have proven themselves as extremely robust, easy to operate and handle DIN containers as a standard feature.

PRODUCT INNOVATION

DEVELOPING TODAY THE PRODUCTS FOR TOMORROW'S WASTE MANAGEMENT NEEDS

We are totally committed to product innovation. In close partnership with our customers we continually strive to improve existing systems and develop completely new solutions.

- The green Hybrid Plug-In technology, minimises the impact on the environment in three ways: up to 30% less CO2 emissions and fuel consumption including noise reduction, are proof of our forward-thinking culture.
- Another example is the TraseWaste telemetry system that provides operators with all the information they require to improve productivity on every route, including major savings in fuel and maintenance costs.
- Engineered for years of hard work, we employ the use of high quality steel where additional strength is required.

LOCAL SERVICE

WHEREVER YOU ARE

The period following the sale is just as important for Geesinknorba as for our customers. We have developed a dedicated team of service engineers and service centres across the UK and Europe to provide prompt and efficient service support to all our customer's vehicles. We have the resource to maintain entire fleets of RCV's, allowing our customers to focus on their core business.

A TEAM OF EXPERT SPECIALISTS IS ALWAYS READY TO HELP YOU!
