

CRM 50

The Copper Recycling Machine CRM-50 is a granulator mill designed to granulate copper from insulated cable in one quick and easy process.

The mill uses 3 mobile and two fixed blades. The chopped particles are layered on to a dry vibrating sieve. Air is blown through the sieve and the light insulation material is separated from the copper. The air blast is adjusted to suit differing weights of insulation. Other non-ferrous wires can be granulated using the CRM-50.

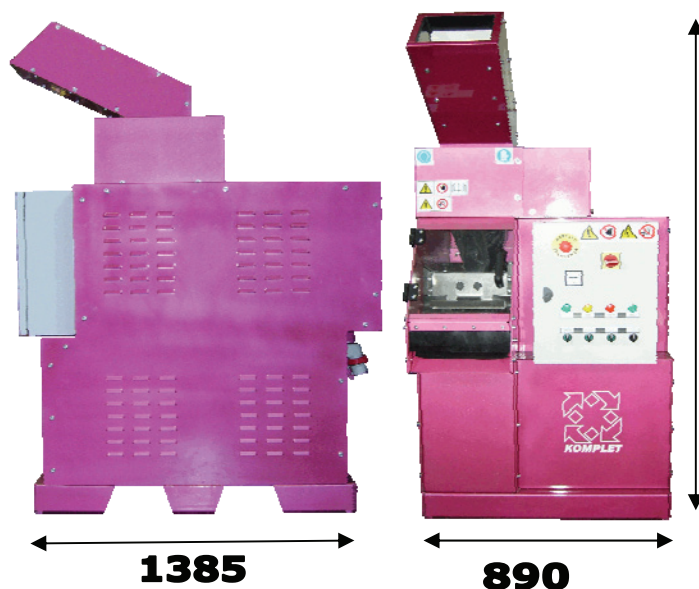

The machine is equipped with an anti-dust filter.

Technical Data:

Length : 1385 mm
Width : 890 mm
Height : 1835 mm
Weight : 550 KG
Power required: 415 V - 3.92 KW
3 Phase plus Earth
Production Rate : up to 50 KG per hour (cables)
