

Key Facts

- Designed, engineered and manufactured in the UK to the highest quality.
- Offers contractors and hire fleets alike a robust, fit for purpose piece of plant for years to come.
- Manufactured around quality components - Honda power plant and Hinowa track-base.
- Integrated load system allows a 1.45 tonne machine to safely carry a payload of up to 1.5 tonnes.
- Tracked base ensures excellent stability and minimum ground damage.
- Service network through Alfa Tail Lifts - established specialists in hydraulics, weight certification, etc., with over 70 engineers on the road in the UK - to ensure rapid service response and peace of mind back up.
- UK made - ensures quality spare parts are always available quickly - rather than subject to Far East lead times!
- UK & International Patents pending.
- CE Compliant.

Specification

- Weight: 1450Kg
- Max lift / carry capacity: 1500Kg
- Power unit:
 - Honda GX630 V-Twin Petrol Engine
 - Air cooled, electric start, 20.8HP (15.5Kw)
 - Emissions compliant
- Hinowa track-base

Dimensions:

The unique lift and carry crawler for all bulk materials, plant and equipment

- Delivers bulk materials, plant and equipment from the roadside into the heart of your site!
- Hugely reduces labour costs - no more barrowing of aggregates, bricks and blocks or winching and dollying of heavy plant.
- The perfect machine for restricted access sites - HOOKA is only 1 metre wide - the same as the loads it carries!
- Unique 'load lock' technology secures the load to the machine - ensuring total stability.

Problem 1

Your bulk building materials supplier is only prepared to drop your goods 'at roadside' and you are faced with a huge labour cost simply to break down the materials and shift them to where you are working.

Problem 2

Heavy plant and equipment - up to 1.5 tonnes - is delivered to site but restricted access means it has to be winched and dollied into position.

Solution

HOOKA picks up any bulk material payload (pallets or 1 tonne bags), or pieces of plant up to 1.5 tonnes. It then secures the load onto its bed using the patented 'load lock' system and transports it quickly and efficiently to exactly where it is required.

HOOKA also enables spoil and other waste materials to be stored in 1 tonne bags around a site. They can then be moved to roadside at the time of waste collection - thereby removing the need for skips and their costly planning permits for public highways.

HOOKA also offers incredible versatility as a mobile 'tool platform' - with its auxiliary hydraulic feeds, double acting main ram, and quick-fit boom end plate it can act as a lift crane or fence post remover, rammer, hole borer - or whatever else your business needs!

Optional extras include a dozer blade for levelling loose materials and (currently under development) a brick grab / hydraulic emptying 'tote' box, which will allow the **HOOKA** to be used as a hi-tip dumper and even lift bricks / blocks to scaffold 'first-lift' height.
