Services to the wet waste industry

Company background

Dexter Watson Limited was formed in early 2012, bringing together a team with specialised backgrounds in engineering and waste handling with the aim of designing and manufacturing innovative equipment to provide effective solutions to the wet waste industry.

Based near the historical city of York, Dexter Watson are ideally positioned to deliver products and services to the whole of the UK and the near continent.

In our short history Dexter Watson Ltd have covered a wide range of projects such as the design and production of roll over winch cover systems for waste water and clean water treatment plants, designed to reduce odours and prevent atmospheric contamination and unauthorised access. We also have experience in extending the service life of existing waste handling equipment through modifications and repairs. Recently, Dexter Watson have developed their own brand of mobile dewatering/sludge handling systems and holding tanks, as well as bespoke specialist tools, safety equipment, access covers and platforms.

Our company's aim

Our main aim as a company is to give value for money, especially in the current financial climate, offering cost effective and practical solutions to our customers. We have the added advantage of sharing our facilities with a long established multi-disciplined fabrication company who operate state of the art equipment and can work with a wide range of materials. This partnership enables us to react quickly and cater to changing market demands making Dexter Watson Ltd both competitive and adaptable.

Products

Our product range includes:

- Mobile coarse screening containers used to separate rags and debris from sewage or oily sludges
- Polymer make up and dosing units to work in conjunction with our sludge thickening/ dewatering units
- Gully and sweeper waste reception system
- Mobile oil interceptors
- Vehicle reversing platforms
- Roll over winch covers for waste water treatment plants
- Bespoke specialised tools
- Bespoke access covers - platforms

BESPOKE PRODUCT HIGHLIGHTS

Mobile Coarse screening container

Main features

- 30 m³ capacity
- Removes rags and debris from sewage
- Separates interceptor waste
- Separates gully and road sweeping waste

Other features

- The collapsible ladder and safety rails
- Hydraulic operated rear door
- Rear door stay and closure aid
- 6" inlet
- 4" lockable gate valve

Front view

Rear view

Internal views

Portable reversing platform

Main features

- Three stage build up
- Bayonets together
- Forklift channels
- HIAB lifting points
- Removable side rails
- Reversing stops
- Produced to the customer's specifications

Stage 1

Stage 2

Stage 3

Stage 4

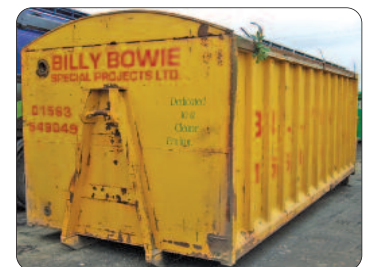

Stage 5 - in action

Equipment modification /refurbishment service

Main features

- Existing equipment modification
- Extending service life
- Cost effective solutions
